

Github Public Repositories: https://github.com/A1vin-aaa/Yupeng_Ex2

Overview:

This is a Message Directory React Native app. Users can create and manage multiple “directories” (channels), view and post messages, edit or delete messages, and add new directories

Features

Directory List: Displays a list of directories (e.g. You, Home, Love, Family, Friends, School).

Add Directory: Enter a name and tap Add to create a new directory channel.

Message View: Tap any directory to see its messages.

Post Message: Type in the input field and tap Send (or Update) to add or edit a message.

Edit/Delete: Each message has Edit and Delete controls.

Back Navigation: Return to the directory list at any time.

Requirements

Node.js (≥ 14)

Expo CLI (npm install -g expo-cli)

Yarn or npm for dependency management

Android/iOS device or simulator

Project Structure

```
./App.js      # Entry point: sets up Navigation & CartContext
./app.json    # Expo configuration (icons, splash, bundle patterns)
./package.json # Scripts & dependencies
```

How to Run Your App in Expo Go

To open your Sport Shop app in Expo Go on your Android or iOS device, you’ll use the Expo CLI’s “start” command. Here’s the step-by-step:

1. Start the Expo Development Server

In your project root, run:

```
``bash
npx expo start
``
```

This launches the Metro bundler, opens the Expo DevTools in your browser, and displays a QR code in the terminal or browser console.

2. Choose Your Connection Type (LAN vs. Tunnel)

LAN: Devices on the same Wi-Fi network can connect directly.

Tunnel: If firewall or network restrictions block LAN, start with:

```
```bash
npx expo start --tunnel
```
```

This uses a public tunnel URL to reach your machine.

3. Open Expo Go and Load the App

QR Code: In Expo Go, tap "Scan QR Code" or use the Camera app, then point at the terminal/browser QR.

Manual URL: Tap "Enter URL" in Expo Go and paste the `exp://...` address shown in DevTools.

4. Use Keyboard Shortcuts

While Metro is running, you can press:

``a`` → Open in Android emulator or device

``i`` → Open in iOS simulator

``w`` → Open in web browser.

5. Reloading & Debugging

Any code changes you save trigger "Fast Refresh" automatically.

Shake your device or press ``d`` in the terminal to open the Dev Menu.

Press ``r`` to manually reload if needed.

With just ``npx expo start``, you can instantly preview and iterate on your Sport Shop app in Expo Go—no rebuilds required.
